ABOUT ME

I'm Tristan and I am a full-stack web developer with a passion for tech and helping others.

I love working in teams, as this allows me to create opportunities for growing my skills and supporting my peers.

I am looking for a role at the right company, with diverse projects that have positive real-world applications.

I have played around with code since a young age and have always enjoyed the creativity in making projects that allow me to solve coding problems.

I became interested in programming from age 12 after joining a coding club at my primary school.

We only learnt Scratch at the time, but I eventually self-learnt basic Python.

In my Digital Technologies classes in high-school we learnt basic HTML, CSS, and JavaScript.

I was consistently awarded 'best in year' for that subject as well as representing it in open days.

After high-school I still did not feel ready to jump into the industry so studied at NMIT for a year.

After that - and most recently - I studied at Dev Academy, where I learnt React and gained valuable skills for working in teams.

I look forward to using and sharing my skills in your workplace.

TECHNICAL SKILLS

- JavaScript
- React.js
- HTML
- CSS
- Git
- GitHub
- Agile Methodologies
- Visual Studio Code
- Full-Stack Web Development
- Python

HUMAN SKILLS

- Quick-Learner
- Teamwork
- Communication
- Personal Development
- Creating a Flourishing Environment

EXPERIENCE

Dev Academy (Aug 2023 – Dec 2023)

I studied at Dev Academy for 17 weeks.

The first 6 weeks were done online, but the bulk of the course was in the following 9 weeks.

I moved up to Wellington for these, to get the most of the course by doing it in-person.

We did 800 hours of intensive work, 60 each week, consisting of many problems to solve in pairs, as well as several group projects.

In this I gained many technical skills around Full-Stack Development using React.

But more importantly, I gained valuable skills in working in teams, as well as creating environments to help people flourish.

It was a great change from NMIT, as the group culture was very close and supportive.

We got to learn by working on problems collaboratively, which not only made the technical learnings easier, but also made it a great environment to give the skills and experience required for working in teams.

After this, we had a final 2 weeks of online learnings to aid us in career skills.

Residential Cleaner (May 2023 – Sep 2023)

I worked as a residential cleaner, in a team of 2.

This involved attention to detail across various tasks such as sanitizing toilets and showers, polishing wood surfaces, cleaning mirrors and glass, as well as vacuuming and mopping.

EDUCATION

Dev Academy (Aug 2023 – Dec 2023)

In addition to the above, I also gained a Level 6 Certificate in Applied Software Development from this course.

NMIT (Feb 2022 – Nov 2022)

I completed the first year of this course but left due to not getting enough out of it.

I was recommended Dev Academy by a tutor of mine from NMIT, as he thought it would be more suited to me.

At NMIT, we didn't do as many projects or group work as I'd expected.

It was a slow and outdated experience, falling behind the rapidly evolving world of tech.

It also lacked a sense of community and had few exercises designed to teach coding in a collaborative environment - which would also give us plenty of experience with working in teams.

INTERESTS

- Programming
- Science, Technology, and Space
